Portfolio | GitHub | LinkedIn

Professional Summary

Full stack engineer building production web and mobile applications with TypeScript, Remix, Next.js, React Native, and NestJS. Experienced in PostgreSQL performance and read replicas, payment and credit systems, LLM integration, and asynchronous processing. Takes features from technical scoping through implementation, testing, and release across consumer and AI products.

Technical Skills

- **Languages:** TypeScript, JavaScript, Python, SQL; PHP and C#
- **Frontend and mobile:** React, Next.js, Remix, React Native, Astro, Tailwind CSS, shadcn/ui, Framer Motion
- **Backend and data:** NestJS, Django, FastAPI, Laravel, ASP.NET Core, REST APIs, PostgreSQL, Prisma, Entity Framework Core, Redis, MongoDB, MySQL, SQL Server, Supabase
- **AI and LLMs:** OpenAI, Gemini / Vertex AI, DeepSeek, OpenRouter, LangChain, Langfuse, Whisper, prompt engineering, structured outputs, provider fallbacks
- **Infrastructure and delivery:** Cloudflare Workers / Pages, Trigger.dev, BullMQ, AWS S3, Docker, GitHub Actions, Sentry, Git, Linear
- **Data visualization:** Pandas, Chart.js, Recharts, Tableau, Leaflet / GIS

Professional Experience

PioneerDev AI LLC

Full Stack Software Engineer | September 2025 - Present

- Delivered web and mobile features for FilipinaMeet and Marryly, owning implementation and deployment while coordinating technical scope, task tracking, QA, and release priorities.
- Improved high-traffic flows by parallelizing loaders, optimizing Prisma queries, removing unnecessary transactions, and caching frequently used endpoints in Redis.
- Designed read-replica routing with read/write splitting, primary-read pinning after writes, replica-lag monitoring, and connection health checks.
- Built PayPal subscription and credit flows with entitlement checks, duplicate-charge prevention, and billing alerts. Shipped credit top-ups, weekly rewards, and member credit history.
- Engineered LLM-based trust scoring and contact-information moderation with contextual detection, cached scan results, and Langfuse tracing. Soft-launched web voice messages with transcription and admin playback.
- Integrated model providers for a generative media platform with token limits, structured outputs, and graceful fallbacks; optimized prompts, prompt-cache telemetry, and PostgreSQL indexes.
- Moved heavy autorun workloads from Cloudflare Workers to Trigger.dev, eliminating out-of-memory 503 errors, and hardened an analytics proxy with rate limiting.
- Developed LLM-powered operator enrichment and matching for EIP / Yield using Remix, Prisma, PostgreSQL, and BullMQ / Redis queues for reliable asynchronous processing.
- Built NestJS community APIs and a Next.js admin app with S3 uploads, pagination, authentication guards, and socket access controls. Delivered Astro discovery sites and an automated pipeline publishing 50+ targeted articles.

Earlier Experience

TSP Marine Industries

Software Engineer | Vessel Inventory Management System | November 2024 - June 2025

- Built and deployed VIMS with Next.js, TypeScript, Tailwind CSS, and Supabase, giving eight vessel crews visibility into onboard inventory and reducing resupply planning time by 40%.
- Implemented role-based access, PDF requisition exports, offline transaction caching and synchronization, and GitHub Actions deployment workflows.
- Worked with managers to align inventory workflows, produced technical documentation, and trained staff to use the system.

LGU General Santos City CEMCDO

Developer Intern | January 2025 - April 2025

- Developed fund-utilization and cooperative-profiling modules using Django, PostgreSQL, and Tailwind CSS, with normalized database models and audit trails.
- Automated multi-sheet Excel reports with OpenPyXL, cutting manual preparation time by 50%, and built a draft-transaction subsystem reused across four divisions.
- Nominated for Outstanding OJT for performance during the internship.

COTSEYE Project

Co Developer | May 2024 - August 2024

- Co-developed a Django application for Crown of Thorns monitoring in Sarangani Bay, with community reports, Leaflet maps, and conservation dashboards. Optimized database queries and built responsive interfaces for mobile field reporting.

Selected Projects

Order and Inventory Management API

Built an ASP.NET Core and PostgreSQL API for products, stock validation, idempotent orders, and audit logging, using Entity Framework Core, FluentValidation, Serilog, Swagger, and Docker.

AI Powered Email Generator

Developed a Django and LangChain assistant with configurable tone and signatures, OpenRouter integration, Whisper transcription, Gmail sending, and a lightweight CRM.

Headless E Commerce Mini Store

Built a Next.js and TypeScript storefront using Shopify Storefront GraphQL, server-side data fetching, reusable React components, and Tailwind CSS.

Education and Recognition

Bachelor of Science in Information Technology

Mindanao State University - General Santos | 2021-2025

Major in Database Systems | Cum Laude | PSITE12 Most Outstanding IT Student, 2025

- JITS IT Week Hackathon Champion (2023 and 2024); Hack4Gov3 Region 12 Champion and Excellence Awardee, National Finals 4th Place (2024); Trend Micro CTF Qualifier 1st Place, Finals 4th Place (2024).

Selected Training

Google: Agent Fundamentals; Gemini for Application Developers (2026). SoloLearn: Agentic Workflows; Generative AI in Practice (2026).
